Make Your Course(s) Available

Each semester, courses are unavailable in Blackboard until you make them available. When a course is unavailable, students cannot access the course or any of its content, including the syllabus. Before the start of each semester, plan to make each course available to students after you've set up the course site in Blackboard.

Prevent Plagiarism

Looking for a tool to improve academic writing skills? Suspect plagiarism? Use Turnitin!

What's New in Blackboard 9.1?

Blackboard 9.1 boasts an updated appearance while maintaining the same basic structure and functionality. Most tasks that you perform in Blackboard have stayed the same, while some usability and bug improvements have been added. This document describes key new features.

About Bentley's Online Learning Program

Bentley online courses allow students to choose how they attend class, either by physically coming to campus or by "virtually" attending from a remote location, using only their computer and an internet connection.

3D Prototype for a Handheld Device for Travelers in Boston

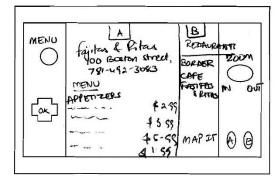

Bill just rented out a PTG device from his hotel. He powers on the device and the GPS installed in the device pinpoints his exact location on the map. He is very hungry and wants to find out restaurants in the neighborhood. He clicks on the menu button on the left hand side of the device. As soon as he pushes the menu button a selection tool highlights the menu on the right hand side of the device (Maps, Restaurants, Points of Interest, etc.). Bill uses the navigation arrows to scroll down to the list and presses the ok button when the Restaurant is selected.

When Bill selects Restaurant from the menu, a list of all the restaurants pop up on the map. He uses the navigation arrows to scroll through the map to find out other restaurants that are not displayed on the screen. Bill sees Fajitas and Ritas on the map and is interested in finding out more about this restaurant. He then clicks on button B to toggle from Screen A to Screen B. He then navigates down to Fajitas and Ritas and presses Ok.

Bill now sees a screen with details on the restaurant he just selected. He can see a menu for the restaurant as well a phone number if he needs to contact them to make a reservation. He scrolls through the menu and decides to visit this restaurant. He then pushes button B to toggle to Screen B and then selects the option Map It which then provides directions in detail to reach this restaurant from where he is standing.
